ESSENTIALS FOR HEALTH REFORM:
Using Networks to Implement and Improve EHRs and other HIT
Behavioral Health providers are being challenged to adopt health information technology with very limited resources. There is a need to prepare for increased numbers of patients receiving health insurance benefits, requirements for electronic billing, data exchange among treating providers and an ever increasing need to collect and use health information to improve care.

These intense one day seminars will provide attendees with the necessary information to move forward in adopting, acquiring and implementing electronic health records and other health information technology. Presenters will review the various stages of implementation from initial planning and assessment through advanced topics such as data warehousing. There will be a focus on utilizing networks of care to build on economies of scale. Participants will leave with a thorough understanding of where they are in the process, and a plan for next steps in their health information technology implementation efforts.

These seminars are a collaborative work of NIATx, SAAS and The National Council supported by SAMHSA.
Topics include:

- Overview of the CMS Rule on Medicare and Medicaid Incentive Payments
- Practice Management Systems vs EHRs
- Benefits & Economies of Scale when working with a Network
- HIT Planning and Assessment Process
- HIT Workflow Redesign
- Due Diligence and Vendor Negotiations
- EHR Selection and Implementation
- Disaster Recovery and Business Continuity Planning
- Data Warehousing
- Use of Telemedicine
- Health Information Exchange and Behavioral Health
TeleMedicine & Behavioral Health
This presentation will cover the basics of Telemedicine principles and best practices, in a framework for the Behavioral Health provider. Today’s topics include:

- History
- Pros/Cons
- Real World Applications
- Technology
- Administrative Concerns
- Readiness Assessment / First Steps
Terminology / History
Terminology – *Often Interchangeable*:

**Telemedicine**: is the delivery of any healthcare service or transmission of wellness information using telecommunications technology.

**Telehealth**: used to encompass a broader definition of remote healthcare that does not always involve clinical services. Videoconferencing, transmission of still images, e-health including patient portals, remote monitoring of vital signs, continuing medical education and nursing call centers are all considered part of telemedicine and telehealth.

-- *American Telemedicine Association*
Terminology

“Telemedicine uses communication networks for delivery of health care services and medical education from one geographical location to another. It is deployed to overcome issues like uneven distribution and shortage of infrastructural and human resources.”

History

1959 – University of Nebraska (two-way televisions)

1970’s – Funding Issues, limited screen quality, “bulky” equipment – decline in interest

1980’s – “Health Psychology” term coined and new attempts to integrate BH with medicine

1990’s – Significant increase in faster technology / improved equipment

2000’s – Payors begin to view more favorably as clinical benefits established & cost effectiveness demonstrated

Pros & Cons
What challenges are most often cited as barriers in the delivery of Behavioral and Mental Health Care?

**Access to Care:**
- Location based
- Financial / insurance status
- Cultural / linguistic challenges

**Access to Workforce:**
- Rural areas / low population density areas
- Provider shortages
- Compensation / billing challenges, especially for safety net populations
Why Telehealth Today? (PROS)

• Improved Access to care

• Cost Efficiencies

• Patient Demand

-- American Telemedicine Association
Why Telehealth Today? *(PROS)*

• Improved Access to care

  Increased access to patients in distant / remote areas, and expanded reach for physicians and health facilities beyond their own offices

-- American Telemedicine Association
Why Telehealth Today? (PROS)

• Cost Efficiencies

May reduce the cost of healthcare and increase efficiency through better management of chronic diseases, shared health professional staffing, reduced travel times, and fewer or shorter hospital stays.

-- American Telemedicine Association
Why Telehealth Today? (PROS)

• Patient Demand

Using telemedicine technologies reduces travel time and related stresses to the patient.

-- American Telemedicine Association
Potential CONS:

- Must be careful to follow interstate licensing rules when applicable
- Clinicians may find it somewhat challenging to pick up on nonverbal cues (such as psychomotor agitation or poor hygiene)
- Quality / Cost of available equipment ranges widely – must consider all factors in selection
- Some technical hiccups will happen – who is available to support the clinician in the session to minimize impact to patient care?
Potential CONS:

- Patient / client may not feel the empathy from the clinician that would be conveyed in a face to face encounter
- Some BH techniques are potentially less successful
- This modality potentially limits the type of patients one might select for care, or might require additional post-session coordination / support
WhatClinicians are Offering Telehealth Now?

Telepsychiatry

“… offers hope for addressing longstanding problems regarding work force shortages and access to care, especially in remote or rural areas.”

Emerging Best Practice:

Telepsychiatry-based culturally sensitive collaborative treatment may help to expand access to culturally competent psychiatrists fluent in patients' native languages and improve treatment of depressed minority patients in primary care settings.

Other Clinicians:

- Psychologists
- LCSWs
- Marriage / Family Therapists
- Substance Abuse Counselors

Therapy has been successful utilizing telehealth throughout the life cycle.
Real-World Applications
Medicaid Pilot Telehealth Project – Rural Florida (early 2000’s)

University of Florida / FQHC Partnership for Children

• Equipment from prior successful medicine pilot used
• Would it work for Behavioral Health?
  – Focused on Children & Adolescents
  – ADHD Protocols
  – Successes: Patient Satisfaction, Increased Access, Broader Reach
  – Cons: Equipment was not “real-time” (time delays)
Health Under Guided Systems (HUGS) – Launched 2011

Sponsored by the Naples Children Education Foundation (NCEF)

- Collaboration of key stakeholders in Collier County interested in Behavioral Health
- Multi-sites utilize existing capacity at David Lawrence Community Mental Health Center
  - Also for Children & Adolescents
  - Traditional Telepsychiatry Model
  - Successes: Patient Satisfaction, Increased Access, Broader Reach, Improved technology allows real-time communication & clarity
  - Cons: Challenge to integrate EHRs

Army’s Tele-Health program goes the distance
By Jennifer Clampet
U.S. Army Garrison Wiesbaden Public Affairs Office

1st Armored Division Soldiers are the first in Europe to experience the newest high-tech reintegration tool for behavioral health

Soldiers are comparing the Army’s new Tele-Health behavioral screenings to Skyping with their families. And that relaxing comment is sitting well with the Army’s behavioral health professionals.

TeleKidcare®

Evolution of Services

TeleKidcare was originally designed to provide acute care to school children for sore throats, ear aches and similar ailments. Since its inception, the TeleKidcare model has shifted to provide primarily mental health services as parents and school nurses identified a gap in the availability of mental health services. TeleKidcare allows families to seek treatment in a familiar environment free from any cultural stigma toward mental health. Typical services now include assessing, treating, and managing a range of mental health concerns such as ADHD, depression and mood disorders, grief and adjustment reactions, and anxiety disorders.

TeleKidcare is a community-centered, collaborative effort to provide care for underserved school children. With the essential support of school district and administrators, the day-to-day involvement of the school nurse, and the expertise provided by KUMC doctors, TeleKidcare has conducted thousands of acute care and mental health consults using the latest video technologies.

Other Programs in the News

Major Finding:
Telepsychiatry cuts reduced hospital admissions for mental health patients from about 12% to 8% at 25 hospitals in South Carolina, and shortened emergency department stays from an average of four to three days.

Data Source:
Outcomes data for more than 6,000 telepsychiatry patients and matched controls.

Technology
Technologies Typically Employed for Telehealth

Store and Forward Technologies:

- **Email** *(Note: Clinical Validation / Payor Reimbursement still open issues)*

- **TeleHome technologies**
  - Internet-based systems that use a personal computer
  - In-home communication and monitoring devices
  - Cellular technologies

*Telemental Health Guide – The Center for Eliminating Mental Health Disparities, University of Colorado at Denver*
Technologies Typically Employed for Telehealth

Most Commonly Associated: Live, Interactive Technologies

- Telephone (sometimes referred to as “POTS” for “Plain Old Telephone System)
- Video Teleconferencing (VTC)

_Telemental Health Guide – The Center for Eliminating Mental Health Disparities, University of Colorado at Denver_
Administrative Concerns
State by State Issues

- Potential Restrictions – Facility
- Potential Restrictions – Provider
Payor Considerations

• Medicare will pay for a limited number of Part B services that are furnished by a physician or practitioner to an eligible beneficiary via a telecommunications system. For eligible telehealth services, the use of a telecommunications system substitutes for a face-to-face, “hands on” encounter.

Medicare Learning Network (MLN), Telehealth Services Factsheet, July 2009
Payor Considerations

• Medicaid reimbursement for telehealth services by psychologists is available in as many as 13 states: Alaska, Arizona, California, Colorado, Hawaii, Kansas, Maine, Michigan, Nebraska, North Carolina, Oklahoma, Utah, and Virginia.
Payor Considerations

- Legislation requiring private sector insurance companies to pay for telehealth services in: California, Colorado, Georgia, Hawaii, Kentucky, Louisiana, Maine, New Hampshire, Oklahoma, Oregon, Texas, and Virginia. While all of these states mandate coverage, not all require reimbursement rates on par with rates for face-to-face services.

*Reimbursement for Telehealth Services, by Legal & Regulatory Affairs Staff of the American Psychological Association Practice Organization March 31, 2011*
Getting Started
Getting Started

Needs Assessment:

- Legal Environment
- Local area challenges
- Provider availability
- Patient perspective / acceptance
- Technology
- Project Management
- Financial
- Billing
A thorough evaluation of needs at a particular site is critical:

- Consider the patient’s clinical needs
- Potential benefits
- Potential costs
- What clinical support is available at the patient's site?
- What is the availability of follow-up care?

Criteria for Success

Recommendations:
As with all advanced Health Information Technology projects, time spent in assessing, planning, and gaining local buy-in (especially from Clinician Champions and clients) is key to success.

Potential Funding Sources

Health Resources & Services Administration (hrsa.gov/grants)

• **Deadline – 10/31/2011:** Rural Health Network Development Planning Grant

• **Deadline Anticipated December 2011:** Telehealth Network Grant Program

U S Department of Agriculture (rurdev.usda.gov/UTP_DLT.html)

• **Deadline Anticipated Spring 2012:** RUS Distance Learning & Telemedicine

Headquartered in Portland, Oregon, OCHIN is a national non-profit collaborative, currently comprised of 42 organizations across seven states representing over 400 clinics and over 2,000 providers. With the ultimate goal of transforming health care in the United States, OCHIN provides integrated HIT software products and a wide variety of services, training and education to community health clinics, mental health services and small practices serving the medically underserved.

www.ochin.org
Who We Are

- 501c(3) Collaborative Health Center Controlled Network
- 51% of Board Members are Community Health Center Executives
- 42 member organizations, over 400 individual clinics & 2000 providers
- 1M patients, 2.140M Practice Management & 1.712M Electronic Health Record annual visits
OCHIN PRODUCTS AND SERVICES

- **Practice Management**
  - Scanning solutions
  - FQHC customizations
  - Special and community Library Reports
  - Flexible build and configuration
  - Automated patient notifications
  - Revenue cycle management

- **Electronic Health Record**
  - Integrated community health record-medical, dental, behavioral health, school-based clinics
  - E-prescribing
  - Decision support tools
  - Case/care management tools
  - Integrated lab interfaces
  - Advanced role based security
  - Voice recognition
  - Reporting and benchmarking tools
  - Document management
  - Continuity of Care Record (CCD)
  - Patient Personal Health Record (PHR)

- **Implementation, Training and Products**
  - Project management
  - Information systems implementation
  - Network design
  - HIT integration & interoperability
  - Billing and revenue cycle management
  - Staff PM/EHR training
  - Web-based training modules

- **Support**
  - Project Management
  - 24/7 service desk
  - Advisory and consulting services
  - Meaningful Use reporting tools
  - Clinical reporting tools
  - Specialty build for grant
  - Vendor escalation

- **Practice Based Research Network**
  - Safety Net clinical research & clinical collaboration opportunities

Core Health Information Technology Offerings

- **Practice Management System** *(including Practice Analytics)*
- **Electronic Health Records** *(240,000+ Patient Records)*
  - ePrescribe
  - Lab Orders / Results
  - Specialty Provider Referrals
  - Quality Reporting
- **Electronic Oral Health Records** *(including Digital Imaging)*

**“Meaningful” Users of EHR Since 2005**

**Professional Services**

- **Project Management / Implementation Support**
  - Leadership and task level monitoring
  - End to end project / system design
  - Workflow / Process Consideration
  - On-site Go-Live Choreography
- **Training**
  - Modalities matched to provider / end user needs, including classroom, coaching, and web-based tools
  - Competency exams
- **Report Writing / Administration**
  - Custom QA/QI, Peer Review, and Operations reporting
  - Meaningful Use – Workflows, Provider-level detail, and gap analysis
- **EHR Development / Enhancement**
  - Clinical Committee directed
  - Interface management to support HIE and other functionality to the provider desktop
- **Technical Assistance & Support**
  - Help Desk processes more than 7,000 requests annually; fewer than 5% escalated to vendors
  - 24x7 System Availability
- **Tier 1 Data Center Partner**
  - Server Redundancy
  - Privacy / Security Monitoring & Management
  - 24x7 Server Monitoring / Network Administration
Service Area Counties: 41
Provider Goal: 2,026

- Education and Trusted Resource for Latest Information
- Best Practices Dissemination
- System selection assistance
- System implementation support
- Technical assistance
- Privacy and security best practices
- Workflow redesign

- Clinical outcomes reporting / data integrity
- Federal regulations navigation
- “Meaningful Use” education, application, and attainment
- Education and assistance in achieving eligibility for CMS EHR Adoption Incentive Program funding (Designed to help overcome the financial barrier to EHR adoption)
